Worldwide Birding Adventures

Mexico

Veracruz & Eastern Sierras Extension

22nd March to 27th March 2022 (6 days)

Oaxaca

27th March to 5th April 2022 (10 days)

Slaty Vireo by Eric Martinez

Our comprehensive exploration of Oaxaca is jam-packed with specialties taking in the major birding sites of Teotitlan del Valle, Benito Juarez National Park, Cerro San Felipe, the archaeological spectacle of Monte Alban and Huatulco. With a high level of endemism, we set out to find dry interior endemics such as Ocellated Thrasher, Bridled and Oaxaca Sparrows, Boucard's Wren, Dwarf Jay and the diminutive Dwarf Vireo. Cerro San Felipe is expected to reward us with Russet Nightingale-Thrush and the piercing Red Warbler, possibly one of the most attractive birds in all of

North America. As we marvel at the iconic Monte Alban, we will also be searching for the endemic Slaty Vireo, Ocellated Thrasher and Blue Mockingbird. Our time in Huatulco will be spent birding the endemic strewn Sierra de Miahuatlan for such delights as Long-tailed Wood Partridge, Blue-capped Hummingbird, White-faced Quail-Dove, Mexican Hermit, Long-billed and Plain-capped Starthroat, West Mexican Chachalaca, Citreoline Trogon and Red-breasted Chat.

As the tour draws to a close, we change tack and head out to the sea off The Pacific for a pelagic, with such headline species as the endemic Townsend's Shearwater (becoming increasingly rare). We shall also be on the lookout for Christmas and Galapagos Shearwaters, Nazca and Red-footed Boobies and both the rare Black and Least Storm Petrels.

Our Veracruz & Eastern Sierras Extension takes in some of the major highlights of the Lower Gulf of Mexico, covering the towns of Xalapa for such delights as Strickland's Woodpecker, Rufous-naped Wren, Mexican Shearwater, and the elusive Bearded Wood Partridge before heading to Tuxtepec and Valle Nacional for Sumichrast's Wren, Ornate Hawk-Eagle, White-faced Quail-Dove, the incredibly rare Dwarf Jay and Red Warbler.

THE TOUR AT A GLANCE...

VERACRUZ & EASTERN SIERRAS EXTENSION ITINERARY

Day 1	Arrival in Veracruz, transfer to Xalapa
Day 2	Cofre de Perote and Xalapa area
Day 3	Xalapa to Huatusco
Day 4	Huatusco to Tuxtepec (Bearded Wood Partridge)
Day 5	Tuxtepec to Valle Nacional (Sumichrast's Wren)
Day 6	Valle Nacional to Oaxaca City

OAXACA ITINERARY

Day 1	Arrival in Oaxaca City
Day 2	Teotitlan del Valle
Day 3	Benito Juarez National Park (Dwarf Jay)
Day 4	Yagul, and Central Valley clean-up
Day 5	Cerro San Felipe and Monte Alban; night in the Sierra Madre Occidental
Day 6	The Sierra Madre Occidental and Huatulco
Days 7 & 8	Huatulco area
Day 9	Pelagic off Huatulco and area clean-up
Day 10	Final departures

TOUR MAP...

Veracruz & Eastern Sierras Extension

Day 1: Arrival in Veracruz, transfer to Xalapa. For any participants that may be joining us in Veracruz from abroad, you will arrive into Veracruz International Airport where you will be met by our representative and transferred to our lodgings in Xalapa.

Day 2: Cofre de Perote and Xalapa area.

We will kick off our tour today birding the nearby Cofre de Perote. This inactive, perfectly conical volcano offers some great birding and wildlife opportunities, and the surrounding coffee plantations and humid cloud forests will supply an impressive list of birds for just our first day! A few species that we might find in the drier, high-elevation forests include Montezuma Quail (rare), Blue-throated, White-eared and Broad-tailed Hummingbird, Strickland's Woodpecker, Steller's and Transvolcanic Jay, White-breasted and Pygmy Nuthatch, Mexican Chickadee, Eastern Bluebird and our first chance for the endangered, range-restricted Bearded Wood Partridge. Garnet-throated and Bumblebee Hummingbird, Grey-breasted Wood Wren, Ruddy-capped Nightingale-Thrush, Black Thrush and Common Bush Tanager are a few of the species that stick to the upper elevation cloud forests of the Sierra Madre Oriental, and which are likely today.

Mexican Sheartail by Rich Lindie

Day 3: Xalapa to Huatusco. The forests and scrub right around Xalapa are home to more than 300 species of birds within a 10 mile-vicinity. Today, we will have a full day to explore the environs of this attractive colonial city. The habitat is a mixture of humid foothill forests and semi-tropical deciduous forest, as well as plenty of edge and secondary habitats. Some of the more important endemic species exemplary of the special habitats here include Wedge-tailed Sabrewing, Azure-crowned Hummingbird, Blue-capped Motmot, White-fronted Parrot, Spot-breasted Wren, Yellow-winged Tanager. Other species new to the tour that we may encounter today should include Plain Chachalaca, Hook-billed Kite, Red-billed Pigeon, Ferruginous Pygmy Owl, White-bellied Emerald, Buff-bellied Hummingbird, Canivet's Emerald, Gartered and Collared Trogon, Smoky-brown and Bronze-winged Woodpecker, White-crowned Parrot, Olivaceous Woodcreeper, Boat-billed and Social Flycatcher, Masked Tityra, White-eyed and Blue-headed Vireo, Brown Jay, Band-backed Wren, Golden-crowned Warbler, Black-headed Saltator, White-winged Tanager, Montezuma Oropendola, and both Yellow-throated and Elegant Euphonia. An amazing array of beautiful species right around town!

Velasquez's Woodpecker by Adam Riley

Today we will also focus on some lower-elevation scrub and drier forests near the town of Mirador. These thorn forests extend northward into Central Texas, so some of the avifauna today will be shared with areas farther north. Here, many species reach the southern limits of their breeding range. Some of the species we will search for include Velasquez's Woodpecker, Couch's Kingbird, Rufous-naped and White-bellied Wren, Black-crested Titmouse, Long-billed Thrasher and the endemic Mexican Sheartail and Bronze-winged Woodpecker. In the late afternoon, we will journey back into the mountains towards the sleepy mountain town of Huatusco

Sumichrast's Wren by Eric Martinez

Day 4: Huatusco to Valle Nacional (Bearded Wood Partridge).

Today will be devoted to finding one of the rarest and most sought-after birds in all of Central America: Bearded Wood Partridge. The shady ravines and dense brush around the coffee plantations are the preferred habitat of this spectacular bird. Many other species reside in the coffee plantations and humid mid-elevation forests and we will certainly encounter a great many neotropical migrants and resident species alike. With luck, we will find our target bird early, freeing up some time for more exploration at higher elevations. This evening we will be in Valle Nacional, which puts us just a few minutes from tomorrow's target species, yet another of Mexico's near-mythical endemics.

Gartered Trogon by Clayton Burne

Day 5: Valle Nacional (Sumichrast's Wren). There are two species of Wrens belonging to the genus *Hylorchilus*. Both are endangered species that inhabit ancient karst limestone outcroppings and rocky, forested, hills in Central Mexico. Sumichrast's Wren is found only in a tiny area of limestone foothills in southwestern Mexico. We will dedicate our morning's birding effort to finding this species on a forested hill near town. This skulking species can often be located by listening for leaves being rustled or overturned on the forest floor, or locating an individual by song. Other species of interest reaching the northern limit of their home ranges in the same forest include Thicket Tinamou, Stripe-throated Hermit, Lesson's Motmot, Red-lored Parrot, Red-legged Honeycreeper, White-winged Tanager and Red-throated Ant Tanager. Laughing Falcon, Altamira Oriole, Blue Bunting, Black-headed Saltator and both Scrub and Yellow-throated Euphonias are some of the more attractive, widespread birds that share the forest with the wrens.

In the afternoon, we will find ourselves birding one of the most productive roads in the whole of Central America as we work our way up the mountain to Valle Nacional. The forest becomes more lush as we cruise through the foothills into lower subtropics. A few side roads provide access to great forest where we can look for Grey-headed Dove, Black-headed and

Gartered Trogon, Rufous-tailed Jamar, Spot-breasted Wren and the gorgeous White-winged and Crimson-collared Tanager, among many others! We will overnight, again, in the quaint mountain town of San Juan Baptiste de Valle Nacional in the heart of the Sierras.

Day 6: Valle Nacional to Oaxaca City.

Today we will bird our way up and over the mountains, to the valley of Oaxaca. By transecting the Sierras today, we will have access to subtropical, cloud and pine-oak forests. The list of birds recorded on this highway tops 300 species! With only 170km to travel today, we will have more than enough time to bird the variety of habitats we cross.

Crimson-collared Tanager by Adam Riley

In the middle-elevations and cloud forest we might encounter Crested Guan, Spotted Wood Quail, Black and Ornate Hawk-Eagle, White Hawk, White-faced Quail-Dove, Pheasant Cuckoo, Central American Pygmy Owl, Amethyst-throated Hummingbird (the localised subspecies *margaritae* is liable to being split in future), Emerald-chinned and Stripe-tailed Hummingbird, Collared Trogon, Emerald Toucanet, Barred Parakeet, Black-faced Antthrush, Tawny-throated Leaf-tosser, Scaly-throated and Ruddy Foliage-gleaner, Eye-ringed Flatbill, Green Shrike-Vireo, Azure-hooded and Unicolored Jay, Slate-colored Solitaire, Black-headed Nightingale-Thrush, Chestnut-capped and White-naped Brushfinch, Red-crowned Ant Tanager, stunning Elegant Euphonia and beautiful Blue-crowned Chlorophonia. As we get higher into the Pine-Oak zone, the avifauna changes rather abruptly. Northern Pygmy Owl, Mexican Violetear, Rivoli's, Bumblebee and Berylline Hummingbird, Northern Tufted Flycatcher, Greater Pewee and Hutton's Vireo, possibly the extremely rare Dwarf Jay, Grey-breasted Wood Wren, Russet Nightingale-Thrush and the brilliant Red Warbler have all been regularly seen on this amazing road! Miles and miles of pristine forest and great habitat today will yield tons of great birds to finish off our Veracruz and Eastern Sierra Pre-Tour.

Ornate Hawk-Eagle by Dušan Brinkhuizen

We will end the day in scenic Oaxaca City, where we will meet up with the rest of the participants for the main Oaxaca tour.

Oaxaca

Day 1: Arrivals in Oaxaca City.

Today folks will arrive from their various points of origin into Oaxaca City. Participants will be met at the airport and transferred to our accommodations in the city, where we will be based for the following 5 nights. If time permits, there is plenty to see and do around Oaxaca, which is known as one of the most beautiful cities in Mexico.

Day 2: Teotitlan del Valle. The nearby town of Teotitlan del Valle is situated at the base of the eastern Sierras. It is nestled right in amongst a variety of habitats ranging from intermontane valley scrub up to pine forests in the high mountains nearby. Today, we will spend the day birding the valley scrub, thorn forests, and arid pine-oak zones surrounding the town.

Dwarf Jay by Eric Martinez

Given the geology of the valley, with the central transvolcanic belt to the North, and Sierra Madre del Sur to the South, the degree of endemism in the area is incredibly high. There are fascinating endemic species in each one of the various habitat zones we will explore today! Among the highlights today we will search for West Mexican Chachalaca, Beautiful and Dusky Hummingbird, Pileated Flycatcher, Boucard's Wren, Blue Mockingbird, Ocellated Thrasher, White-throated Towhee and Oaxaca Sparrow. All are endemic species, a few of which have tiny ranges not even extending beyond the border of the state of Oaxaca!

Woodhouse's Scrub Jay
by Owen Deutsch

The higher elevation forests and scrub, as we climb out of the valley, hold a different set of species more typical and widespread of the arid parts of the Sierra Madres. Berylline Hummingbird, Grey-breasted Woodpecker, Nutting's Flycatcher, Golden and Dwarf Vireo, Woodhouse's Scrub Jay, Grey Silky-flycatcher and Black-vented Oriole are all likely.

Day 3: Benito Juarez National Park (Dwarf Jay). A bit further northeast of Teotitlan del Valle is the Benito Juarez area. On the far side of the continental divide here, the humid air of the Caribbean rises and comes back down as drizzle and rain on the higher elevations. Some of the best humid Pine-Oak and Cloud forests in the area can easily be accessed here, and this is the home of the exceptionally rare and striking Dwarf Jay. The forested slopes here also host the rare Long-tailed Wood Partridge, which we will put some effort into searching for, though there are more than a few other fabulous species here. Aztec Thrush is rare and unpredictable,

Mountain Trogon occurs here, White-striped and Spot-crowned Woodcreeper, Greenish Elaenia, Tufted Flycatcher, Greater Pewee, Cassin's and Thick-billed Kingbird, Rose-throated Becard, Chestnut-sided Shrike-vireo, Hutton's and Plumbeous Vireo, Bridled Titmouse, American Bushtit, Brown-backed Solitaire, Olive, Crescent-chested, Red and Red-faced Warbler, Painted and Slate-throated Whitestart, Cinnamon-bellied Flowerpiercer and Collared Towhee are all on the hit list today, too!

Slate-throated Whitestart by Adam Riley

Day 4: Yagul & Central Valley clean-up:

With some 300+ species in the Central Valley region, there will be plenty for us to chase after, in terms of clean-up. Today will be mostly devoted to finding those hard-to-get species we might have missed, or even just getting better views of some of the numerous endemics we might not have enjoyed to our satisfaction, thus far.

Depending on our success in the mountains and our general timeframe, we might choose to visit the interesting archaeological site of Yagul in the evening. These pre-Colombian ruins are a well-kept, smaller version of what we'll be seeing at Monte Alban in a few days. Although the habitat here at Yagul is somewhat less preserved than at Monte Alban, a few species that frequent both are much more easily seen here. The main target at Yagul is the tiny, endemic Beautiful Hummingbird which is known only from the central valley of Oaxaca and surrounding scrubby hillsides. Other fun species here include Lesser Roadrunner, Loggerhead Shrike and the scarce endemic, Bridled Sparrow.

Day 5: Cerro San Felipe and Monte Alban. The largest pre-Colombian ruins in Oaxaca are situated atop a tall *cerro* (hill/small mountain) overlooking the entire metropolitan area of Oaxaca and neighbouring cities. This site, Monte Alban is one of the most-visited and iconic ruin sites in Mexico, and we plan on spending the better part of the day enjoying the ruins and the fantastic birding opportunities within the archaeological park.

Lesser Roadrunner by Eric Martinez

Built atop an artificially-levelled ridge rising over 1,000 feet from the valley floor, Monte Alban served as the socio-political centre of the Zapotec people for nearly 1,000 years. Founded about 500BC, the ruins are among the oldest known sites in Meso-America, and are some of the most impressive in the Western Hemisphere. The hundreds of terraces and dozens of groups of monuments and structures that make up the site can be seen from nearly any direction in the valley. In an effort to maintain the integrity of the structures, the entire ridge was declared a national archaeological park. Save from a few

trails through the scrub, forest and site itself, the whole mountain is very much intact. For us, there will be more than just amazing ruins and history to be enjoyed today: the birding at this site is world class!

Raptors are commonly reported here and include White-tailed Kite, White-tailed, Red-tailed, Zone-tailed and Short-tailed Hawk (quite an array of “tailed” creatures!) as well as Northern Crested Caracara, American Kestrel and Peregrine Falcon. The endemic Dusky Hummingbird, as well as Berylline, are numerous here, though there are many reports of the rare Beautiful Hummingbird in Spring. Ladder-backed Woodpecker, Northern Beardless Tyrannulet, Dusky-capped, Ash-throated, Nutting’s and Brown-crested Flycatcher, Rock, Canyon and Bewick’s Wren, Rufous-capped Warbler, White-collared Seedeater, Black-headed and Blue Grosbeak and Lesser Goldfinch are among the more numerous birds in the scrub here, but the quality and number of endemics here is the real attraction.

Blue-capped Hummingbird by Eric Martinez

The two star birds of this site, undoubtedly, are the dapper and surprisingly attractive Slaty Vireo, and the garrulous Ocellated Thrasher. Both endemic species are frequently seen here, and we hope to have great views of each! Blue Mockingbird is practically abundant here and, despite being a skulker, we plan to lure some out for good views. The list of great endemics here includes Grey-breasted Woodpecker, Pileated Flycatcher, Boucard’s Wren, Rufous-backed Robin, Grey Silky-flycatcher, White-throated Towhee and Black-vented Oriole. After birding we will drive to the town of San Jose del Pacifico and overnight in cabins in pine oak forest.

Day 6: The Sierra Madre Occidental and travel to Huatulco. Early morning birding near the cabins where we will take time to look for a star species in the area, the gorgeous White-throated Jay. Adding to our mounting impressive list of rare and beautiful corvids, this species is found only in the neighbouring state of Guerrero and here, in this corner of Oaxaca. Inhabiting cloud forests and humid

Boucard’s Wren by Eric Martinez

pine-oak forests in these mountains, the White-throated Jay shares its habitat with other interesting birds such as Chestnut-sided Shrike-Vireo, Hooded Yellowthroat, Yellow-eyed Junco, Red Warbler and Black-headed Siskin. Once the activity slows down the will drive and bird our way down toward the Pacific Ocean and to the city of Huatulco.

Days 7 & 8: Huatulco area. Today we will head back up the mountain a little way, and begin birding in the heart of the range of our main target: Blue-capped Hummingbird. With a distribution of just over 150 miles of mountains, known as the Sierra de Miahuatlan, this little beauty has to be one of

the most range-restricted species on Earth. We will spend the better part of today birding the lush subtropical forests that remain in the area, which span dozens of miles of road here, although human encroachment does pose a problem. With the expanding coffee interests and other agricultural concerns popping up in the Miahuatlan Mountains, the Blue-capped Hummingbird was recently categorized as endangered.

Other than the Blue-capped Hummingbird, some of our hoped-for species today include White-faced Quail-Dove, Colima Pygmy Owl (rare), Mexican Hermit, Long-billed and Plain-capped Starthroat, Grey-crowned Woodpecker, Ivory-billed Woodcreeper, Ruddy Foliage-gleaner (rare) Greenish Elaenia, 'West Mexico' Squirrel Cuckoo (a probably future split), Sulphur-bellied Flycatcher, Masked Tityra, White-throated Thrush, Fan-tailed, Golden-browed and Golden-crowned Warbler, Red-legged Honeycreeper, Black-headed Saltator, Rusty Sparrow and the stunning Red-headed Tanager! We might be able to squeeze in some night birding before dinner, or just after, and there are many great species of owls in the area such as Pacific Screech Owl, while Mottled and Buff-collared nightjar are also possible.

Citreoline Trogon by Eric Martinez

The town of Santa Maria de Huatulco is yet another quaint, relatively new city, characteristic of this part of Mexico and a very enjoyable base of operations.

Santa Maria Huatulco sits at the base of the mountains, a few miles from the coast in the middle of prime pacific thorn forest and foothill riparian forests. Depending on our successes yesterday, we might work from the lower elevations higher, but we plan to spend the majority of the day birding the lower elevation habitats near to town.

Russet-crowned Motmot by Eric Martinez

Though not as lush or necessarily as attractive as the forests higher up, the level of endemism around Huatulco and down to the coast is equally, if not more, impressive. Some of the sites we visit include parts of Huatulco National Park or some tracks around the small town of Pluma Hidalgo. In recent years, local farmers and ranchers have begun to appreciate the economic impact that birders and eco-tourists can have on the area and they have begun inviting people to bird their properties. We might visit one or two of the more productive *Fincas* in the area, as well.

Starting off in the lowlands, we will look for Thicket Tinamou, West Mexican Chachalaca, Lesser Ground Cuckoo, Colima and Ferruginous Pygmy Owl, Cinnamon Hummingbird, Citreoline Trogon, Russet-crowned Motmot, Golden-cheeked, Lineated, and Pale-billed Woodpecker, Lilac-crowned and White-fronted Parrot, Orange-fronted Parakeet, Flammulated Flycatcher, White-throated Magpie-Jay, Sclater's, Happy and Banded Wren, White-lored Gnatcatcher, Olive Sparrow, Red-breasted Chat, Blue and Orange-breasted Bunting, Yellow-winged Cacique and Streak-backed, Spot-breasted and Altamira Oriole and Scrub Euphonia.

Once we've had our fill of the lowlands, and as the day heats up, we may decide to head back up into the foothills for a bit of clean-up for any species missed yesterday. The foothill transitional zones are preferred habitat for a few species not mentioned so far in the itinerary, including several nice endemics. Long-billed and Plain-capped Starthroat, Golden-crowned Emerald, Green-fronted Hummingbird, Wagler's (Emerald) Toucanet, Grey-crowned Woodpecker, Bell's, Cassin's and Plumbeous Vireo, Red-crowned Ant Tanager, Audubon's Oriole and both Varied and Painted Bunting all prefer the foothill areas here.

Red-breasted Chat by David Nelson

Day 9: Pelagic off Huatulco and area clean-up. At early morning we'll embark on a pelagic adventure! Our main target is the endemic Townsend's Shearwater. Additionally, we hope to see Black-vented, Christmas and Pink-footed among the more expected Wedge-tailed and Galapagos

Shearwater. Black, Least and Wedge-rumped Storm Petrel all occur in the deep waters just offshore, where we even have a chance of finding a petrel. Red and Red-necked Phalarope, Black and Elegant Tern, and possibly Sabine's Gull could turn up near shore, as well as skuas harassing the terns and gulls. Closer to shore still, we should see Red-billed Tropicbird, Magnificent Frigatebird and Brown, Nazca and Red-footed Boobies.

Wedge-tailed Shearwater by Adam Riley

Day 10: Final departures. This morning we will say our fond farewells after breakfast. Guests will be dropped off at the Huatulco International Airports for international flights home.

FINANCIAL ARRANGEMENTS:

Tour dates, prices, single supplement rates, approximate flight costs and spaces available for this tour are displayed on our website. Please see under IMPORTANT INFORMATION below.

The tour fee includes:

- All meals from dinner on day 1 to lunch on day 6 of the Veracruz & Eastern Sierras Extension, and from dinner on day 1 to breakfast on day 10 of the Oaxaca main tour;
- Bottled drinking water;
- All lodgings;
- Ground transportation;
- Extra activities mentioned in the itinerary;
- Reserve entrance fees; and
- All guiding services (including tips for local guides and services.)

The tour fee does not include:

- Visa fees;
- **ANY** flights;
- Any drinks;
- Special gratuities; and
- Telephone calls, laundry and other items of a personal nature.

Single Supplement: The single supplement cost for this tour will be charged if you wish to have single accommodation. If RBL cannot provide you with a rooming partner for these nights although you choose to share, the single supplement will become applicable. We will make all reasonable efforts to ensure that a rooming partner is found if you do wish to share.

IMPORTANT NOTES:

a) Due to constantly fluctuating exchange rates, we quote our tours in 4 currencies. The tour price is however fixed only in the currency printed in bold, and the actual cost in the other currencies listed will be adjusted according to prevailing exchange rates at the time of final invoicing (usually 4 months before the tour.) The same applies to approximate flight and single supplement rates, which are also quoted in the respective fixed currency.

b) Rates are based upon group tariffs; if the tour does not have sufficient registration a small party supplement will have to be charged.

c) Furthermore, these costs are subject to unforeseen increases in tour related costs and may have to be adjusted as a result.

d) Lastly, we may be forced to change or alter the itinerary and / or the designated Rockjumper leader/s at short or no notice due to unforeseen circumstances; please be aware that we will attempt to adhere as close to the original program as possible.

Special Notes:

- The coastal lowlands can be quite hot, while mornings and evenings in and around higher elevations can be chilly to cold. Overall, the climate is very pleasant.
- This Mexico tour does not require a high level of fitness but participants should be in good general health. Birding will be done on foot and may require walking for several hours at a time (always at a slow pace). There will also be a few lengthy drives, and a number of early mornings and optional nocturnal owling. Should you have any physical limitations or medical conditions please notify us in advance of departure.
- The vehicles we use are comfortable, although we should expect some bumpy roads in some areas.

Tipping: As noted above, gratuities (drivers, hotel staff, restaurants etc) are included on this tour. However, this does NOT include your Rockjumper leader/s. If, therefore, you feel that he/they have given you excellent service, it is entirely appropriate to tip them.

ARRIVAL & DEPARTURE DETAILS:

This tour does not include **ANY** airfares. The Veracruz & Eastern Sierras Extension will depart from General Heriberto Jara International Airport, Veracruz (IATA: VER) on day 1 with a transfer to Xalapa. The tour will conclude at Xoxocotlán International Airport, Oaxaca City (IATA: OAX) in the late afternoon on day 6.

The Oaxaca main tour will depart from Xoxocotlán International Airport, Oaxaca City (IATA: OAX) on day 1 (day 6 of the pre-tour extension). As this day is scheduled as an arrival day, you are free to arrive at any time. The tour will conclude at Bahías de Huatulco International Airport, Huatulco (IATA: HUX) after breakfast on day 10.

The above information in respect of arrivals and departures is a guide only. Precise arrival and departure information will be sent to you in your **Tour Confirmation** package once the tour has been officially confirmed. If you wish to arrive early and/or depart late and would like assistance in this regard, kindly contact the Rockjumper office.

FLIGHTS:

General Heriberto Jara International Airport, Veracruz (IATA: VER) and Xoxocotlán International Airport, Oaxaca City (IATA: OAX) and Bahías de Huatulco International Airport, Huatulco (IATA: HUX) are the main ports of entry and departure for these tours. Where direct international flights are not possible, it is generally advised to fly via Mexico City International Airport, Mexico City (IATA: MEX). **Please DO NOT book any flights until you have consulted the Rockjumper office for confirmation on the status of the tour.**
